

Kickoff

California Agile Vendor Pool

What is this?

- It's a test.
- California State Department of Technology (CDT) is increasing their pre-qualified agile vendor pool.
- Our team, prototype and level of effort will be reviewed to assess our understanding and capability to supply user-centric design and agile software development services.
- CDT will judge and add the best vendors to their list.

What's the goal?

- Give CDT a taste of LZ goodness
- Functional POC
- Meet the requirements/follow the rules
- Have fun and stay sane on a very short project

Priorities?

1. Non-functional requirements
2. Requester can easily find and request based on needs
3. Admin's CRUD is easy
4. Tell enough of a whole story

CDT IT Catalog (prototype A)

- “Catalog” of hardware / software / services
- Admin (CDT) can CRUD & report
- Requester (state agency) can add to cart, check out, see order status, report

12 business days

Let's clarify...

- Roles
- Key risks/questions
- Schedule daily standup (10:15?)
- Schedule demos (every 3 days)

Next Steps

- ~~Set up GitHub repo~~
- Define the approach (high-level stories)
- Reality check what we're committing to
- Get creative on how to cut corners
